This report is a cross-tabulated (or matrix) summary report. It shows the quantity of all products on hand and ordered for each warehouse location. In addition, summary figures are presented both for each product for all warehouses (across) and for all products for each warehouse (down). Presenting information in this columnar fashion helps you to see at a glance the quantities of goods in each location, the total picture for all locations and identify where any shortfalls lie.

Taking you to another level of business analysis a matrix formatted report may provide that extra clarity you need
